

# Install custom Royal Signals enterprise app on iOS

## 1. Scan QR code with iOS phone

- Open the Camera app on your device.
- Hold your device so that the QR code appears in the Camera app's viewfinder. Your device recognizes the QR code and shows a notification.
- Tap the notification to open the link associated with the QR code.

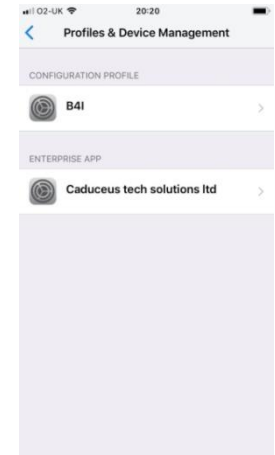

## 2. Manually install and trust an enterprise app

When you first open an enterprise app that you've manually installed, you see a notification that the developer of the app isn't on your device. You can dismiss this message, but then you can't open the app.

## 3. Trust developer

After you dismiss this message, Tap Settings > General > Profiles or Profiles & Device Management. Under the "Enterprise App" heading, you see a profile for **Caduceus Tech Solutions**. Tap the name **Caduceus Tech Solutions** under the Enterprise App heading to establish trust for this **developer**. Then you see a prompt to **confirm** your choice.

After you trust this profile, you can manually install other apps from the same developer and open them immediately. This developer remains trusted until you use the Delete App button to remove all apps from the developer.
